COURSE COMP125

Assignment 2

DOM

Modify the chapter 5 example (photo viewer) to include the following features:

1. You will need to fix the broken code in chapter 5 example. We will do it together during lab session on Feb 1. (*alternatively you can use example of gallery or slideshow from w3school as your starting point*)
2. When the user clicks on a picture and it opens a window containing a zoomed version of the image, give her a hyperlink/button to add the pic to a favourites' area at the top of the first page (add img nodes to the DOM).
3. A maximum of 5 pics can be added to the favourites. After that a message is displayed to remove at least one image from the favourite list.
4. If the user clicks on a favourite image, a Remove link/button shows up next to that picture. If the user clicks it, the pic is removed from the favourites.
5. **(10% of the grade)** User cannot add the same image more than once, the button to remove images from favourites is on the top of the image.
6. **(10% of the grade)** Use good web design practices to enhance visually your html page. Add a title, picture, copyright line, alignment of everything, images are not stretched, don't use default styles, etc...

Submit your assignment to Assignment 2 drop box. ALSO PUBLISH IT to the student web or GitHub pages and include the link in the Assignment 2 drop box.

Basic screenshots for the functionality of this assignment are shown on the next page:
